

SharePoint Performance Tuning

SQL Server database configurations, cache configurations, IIS compression options, SharePoint performance options ...

There are several sets of configuration options to improve the performance of a SharePoint infrastructure, and in each type of application (e.g., public website, document management site, Business Intelligence site), you should configure the system appropriately to obtain the needed performance under each specific scenario. At SolidQ, we specialize in detecting bottlenecks in SharePoint installations and in providing you with specific guidance on configuring your environment.
